

DAVID GÓMEZ BLANCO

Senior Software Engineer
C# • Java • Scalable Systems • Mobile & Live Products

EXPERIENCE

Mar 2023 Present	SENIOR SOFTWARE & AI DEVELOPER The Angry Kraken Madrid, Madrid, Spain - Led the architecture and development of large-scale mobile applications using Unity and C#, designing systems focused on long-term maintainability, scalability, and live product evolution. - Owned complete features and systems end-to-end, from technical design and implementation to production deployment and post-release maintenance. - Developed internal editor tooling and automation systems that reduced repetitive tasks, accelerated development workflows, and enabled non-technical teams to contribute directly to production pipelines. - Mentored and collaborated closely with other developers, providing guidance on software engineering practices, debugging, optimization, and system design. - Designed and implemented asynchronous and multithreaded systems for remote/local asset loading, gameplay responsiveness, and runtime stability. - Performed profiling, debugging, and optimization across Android devices, improving memory usage, loading times, runtime performance, and application stability. - Contributed to live mobile products reaching over 10M+ downloads. - Integrated and maintained third-party platform services including monetization systems and in-app purchases within live production environments. - Participated in technical planning, architecture discussions, and long-term system design decisions throughout the full development lifecycle. - Developed web-based playable ads and interactive experiences using web technologies including JavaScript.
Oct 2022 Mar 2023	UNITY DEVELOPER Ionic Studios – Freelance Ontario, Canadá - Developed and redesigned gameplay systems and core application features for a multiplayer PC title using Unity and C#. - Refactored legacy codebases to improve maintainability, readability, and long-term scalability. - Designed reusable systems and development tools to support rapid feature iteration. - Collaborated remotely within an international multidisciplinary team across multiple time zones. - Took ownership of feature implementation, debugging, and system integration in a fast-paced development environment. - Documented technical systems and development workflows to improve team collaboration and maintainability.
Mar 2019 Oct 2022	UNITY & TECH DEVELOPER Lab Cave Games Madrid, Madrid, Spain - Developed and maintained live mobile applications with over 10M+ downloads across Android and iOS platforms using Unity and C#. - Worked within high-throughput production pipelines based on reusable game frameworks, rapidly adapting, stabilizing, and deploying multiple mobile products. - Diagnosed and resolved gameplay, performance, and production issues, transforming unstable templates into production-ready applications. - Integrated and maintained third-party services including monetization systems, advertisements, analytics, and mobile platform integrations. - Collaborated with CI/CD workflows using Jenkins-based automated build systems connected to Android publishing pipelines. - Developed internal automation tools for game metadata and asset management, reducing repetitive manual tasks and improving publishing efficiency. - Performed profiling, debugging, and optimization tasks to improve application stability, runtime performance, and overall user experience. - Collaborated with multidisciplinary teams throughout the full software development lifecycle in fast-paced live production environments. - Worked alongside cloud-integrated workflows and AWS-connected services within large-scale mobile production ecosystems. - Assisted onboarding processes for new team members and supported knowledge sharing across development teams.
Oct 2017 Dec 2018	SOFTWARE DEVELOPER VIPERA Plc Madrid, Spain / Milan, Italy - Developed enterprise software solutions using Java EE within payment and financial service environments supporting major payment providers including Mastercard and Visa. - Integrated and maintained REST and SOAP APIs for communication between distributed enterprise systems. - Designed and developed modular components using Eclipse IDE and OSGi-based architectures. - Collaborated with senior engineering teams across Madrid and Milan in an international enterprise development environment. - Participated in technical discussions, code reviews, and architecture-oriented development workflows within highly professional engineering teams. - Implemented and validated software requirements through extensive testing, debugging, and unit test development. - Worked with API development and testing tools including Postman to validate integrations and system behaviors. - Contributed to software systems where reliability, security, and maintainability were critical business requirements. - Collaborated closely with senior developers and technical leads to translate functional requirements into production-ready software solutions.
Nov 2016 Oct 2017	DEVELOPER & RESEARCHER Tecnitia Technologies Madrid, Madrid, Spain - Researched and evaluated machine learning and computer vision solutions for internal R&D projects. - Conducted performance testing and analysis across local and cloud-based environments. - Implemented and optimized supervised and unsupervised learning algorithms. - Collaborated on recommendation systems and speech recognition related technologies. - Analyzed technical requirements and proposed implementation approaches for experimental software projects.

EDUCATION

Sep 2016 Jun 2018	MÁSTER EN INGENIERÍA INFORMÁTICA Universidad Complutense de Madrid
Sep 2012 Jun 2016	GRADO EN INGENIERÍA INFORMÁTICA Universidad Complutense de Madrid

SUMMARY

Senior Software Engineer with 7+ years of experience developing and maintaining large-scale mobile and interactive applications using C# and Java. Strong background in software architecture, performance optimization, tooling, and full software development lifecycle. Experienced in building live products with millions of users, improving engineering workflows through internal tools, and delivering scalable, maintainable solutions in multidisciplinary environments. Passionate about solving complex technical problems and driving high-quality software development.

PROGRAMMING LANGUAGES

- C#
- Java
- C++/C
- JavaScript
- HTML/CSS
- Python

SOFTWARE ENGINEERING

- System Design
- Object-Oriented Programming
- Software Architecture
- Design Patterns
- Multithreading & Concurrency
- Performance Optimization
- Debugging & Profiling
- REST APIs
- Full Software Development Lifecycle (SDLC)

TECHNOLOGIES & TOOLS

- Unity
- Eclipse IDE
- Jenkins
- Git
- Docker
- Android/iOS
- REST/SOAP APIs

ADDITIONAL

- Internal Tooling Development
- CI/CD Pipelines
- Cross-Platform Development
- Agile & Multidisciplinary Collaboration
